

# Functions and control flow statements

Paul M. Magwene

```
library(tidyverse)
```

## Defining a function

```
func.name <- function(arg1) {  
  # one or more expressions operating on fxn arguments  
  # last expression is object returned  
  # or use explicitly 'return()'  
}
```

### Example

```
my.mean <- function(x) {  
  sum(x)/length(x)  
}
```
